

Pipeline Operations and Maintenance Services

challenge:

How to keep pace with increasing demands of pipeline operations and maintenance (O&M) without diverting attention from core operations.

Energy companies require pipeline maintenance services groups to support their core operations. Operating these groups internally consumes considerable resources and management attention, diverting focus away from core operations, such as producing and selling products.

Unfortunately, the energy industry has suffered from numerous pipeline safety incidents and violations in the past, resulting in record monetary and criminal penalties and spawning strict safety regulations. Regulatory compliance is becoming more demanding in the areas of record keeping, reporting, inspections and legal liability.

solution:

Source your pipeline operations and maintenance through EMS Pipeline Services.

Consider moving the support function of Pipeline O&M to EMS Pipeline Services. Pipeline O&M is our core business, which allows our highly skilled and experienced employees to execute services for our customers using proven industry best practices. By allowing EMS Pipeline Services to handle all aspects of Pipeline O&M, energy companies have continued access to expert support, while freeing up time and resources to focus on core business activities such as revenue growth, new capital projects and customer service.

EMS Pipeline Services – Your partner in delivering results.

EMS Pipeline Services offers a full range of Pipeline O&M services including regulatory compliance and precision measurement services. We welcome the opportunity to talk with you about serving your needs. Visit us on the Web at www.emsglobal.net or call 713-595-7600 to request more information.
